An impact marking machine, also known as a dot peen or pin marking machine, is a tool used for creating permanent marks on various materials such as metal and plastic through the use of a pneumatically or electromagnetically driven pin. This pin strikes the surface to form alphanumeric characters, symbols, and codes, creating durable and tamper-resistant marks. Impact marking machines are essential for part traceability, product identification, and compliance with industry standards, commonly used in manufacturing, aerospace, automotive, and other industries for direct part marking.

The industry trend for impact marking machines is towards the development of advanced technology that offers greater precision, speed, and versatility. There is a growing demand for machines with integrated software for automated marking, as well as portable and handheld devices for on-site marking and maintenance operations. Additionally, there is an increasing focus on environmentally friendly marking solutions, such as laser and dot peen technologies, which minimize material waste and chemical usage.
