Abstracts

An Impact Modifier is a polymer that is used to improve the impact resistance of another polymer. It does this by increasing the amount of energy required to break the polymer chains. This makes the material more brittle and less likely to shatter on impact. This report mainly focuses on impact-modified nylon 6/6 (PA) compounds market.

According to our (Global Info Research) latest study, the global Impact-Modified Nylon 6/6 (PA) Compounds market size was valued at US\$ 2805 million in 2023 and is forecast to a readjusted size of USD 4072 million by 2030 with a CAGR of 5.6% during review period.

The expansion of the global impact modifier nylon market is attributed to the growing demand for engineering plastics in various end-use industries such as automotive, electrical electronics, and construction. Nylon is widely used in the manufacture of engineering plastics due to its unique properties such as high strength, stiffness, toughness and abrasion resistance. Additionally, nylon has good chemical and heat resistance, which makes it ideal for a wide range of applications. North America is expected to grow at a significant rate during the forecast period. This growth is attributed to the presence of key players in the region and growing automotive industry. Asia Pacific is expected to be the fastest growing market for impact modifier nylon during the forecast period. This growth can be attributed to factors such as rapid industrialization in the region, population growth, and rising disposable income.
