Impact Modifiers are used as a plastic additive for rigid plastics particularly for PVC, and heat stability as well as for impact resistance and UV durability.

Scope of the Report:

This report focuses on the Impact Modifiers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

PVC is the largest application segment of the impact modifiers market, and is projected to account for the largest share of the global impact modifiers market, in terms of volume, by 2023. This growth is mainly attributed to its easy availability and low cost as well as the increasing applicability of PVC among varied end-use industries, such as packaging, construction, automotive, and consumer goods.

Asia-Pacific is estimated to account for the largest market share of the global impact modifiers market in 2018, followed by North America. Asia-Pacific is also one of the fastest-growing regions in the impact modifiers market. The market in this region is anticipated to grow at the highest CAGR during the forecast period. This growth is mainly attributed to the expansion in the construction sector in countries, such as China and India.

The worldwide market for Impact Modifiers is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
