Impact slider beds are conveyor components designed to absorb and distribute the force of heavy or abrasive materials as they are conveyed along a system. Located beneath the conveyor belt, these beds consist of a series of low-friction, impact-resistant surfaces or sliders that help cushion the material's impact when it drops onto the belt. This reduces wear and tear on the belt, minimizes damage to the conveyor structure, and helps extend the lifespan of the system. Impact slider beds are commonly used in applications where large, heavy, or sharp-edged materials are being transported, such as in mining, quarrying, and bulk material handling industries.
