Impact Type Drill Machine, also known as an impact driver, is a power tool used for driving screws and tightening nuts and bolts. It is designed to deliver high torque output with minimal exertion from the user. Unlike a traditional drill, an impact driver uses a rotational force combined with a rapid concussive blows to drive the fastener into the material. This makes it ideal for use with tough materials such as hardwood or metal.

The upstream industry chain of the Impact Type Drill Machine includes the production of raw materials such as steel, plastics, and electronic components. The downstream industry chain includes the construction, automotive, and manufacturing industries, where the tool is commonly used for assembly and installation.

In terms of the world market share distribution by region, the largest market for Impact Type Drill Machines is North America, followed by Europe and Asia-Pacific. The market is highly competitive, with several major players dominating the industry.
