An Implantable Cardiac Resynchronization Therapy Defibrillator (CRT-D) is an implantable medical device that is both a cardiac resynchronization pacemaker (CRT-P) and an implantable cardioverter-defibrillator (ICD)) dual function. It can not only help patients with heart failure and heart enlargement to have more synchronous left and right ventricular contractions, improve heart failure, treat bradycardia, and improve heart function, but also has the electrical cardioversion function of ICD, which can accurately identify ventricular tachycardia and ventricular fibrillation, and Timely anti-tachycardia treatment or electrical defibrillation can effectively prevent sudden cardiac death.
