According to our (Global Info Research) latest study, the global Implantable Cardiac Resynchronization Therapy Equipment market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Heart failure is a complex disease that often requires multiple treatments to work together. Although drug treatment is the most common treatment method, there are still many patients who rely solely on drug treatment for poor results and cannot prevent the disease from getting worse. In order to obtain more effective treatment, doctors usually recommend that patients install an implantable cardiac resynchronization therapy (CRT) device, coupled with drug treatment, which can effectively slow down the development of heart failure and achieve a 'two-pronged approach'!
