The global Implantable Electromechanical Ventricular Assist Device market size is expected to reach \$ 4724 million by 2029, rising at a market growth of 11.5% CAGR during the forecast period (2023-2029).

A ventricular assist device (VAD) is an electromechanical device for assisting cardiac circulation, which is used either to partially or to completely replace the function of a failing heart. The function of VADs is different from that of artificial cardiac pacemakers; some are for short-term use, typically for patients recovering from myocardial infarction (heart attack) and for patients recovering from cardiac surgery; some are for long-term use (months to years to perpetuity), typically for patients suffering from advanced heart failure.
