Implantable medical textiles refer to a class of advanced medical materials that are designed to be implanted in the human body for various therapeutic purposes. These textiles are typically made from biocompatible materials, which means they are well-tolerated by the body and do not elicit harmful immune responses or adverse reactions. The implants are normally used for replacing arteries, heart valves, joints etc.

Implantable products are biomaterials which are used for wound closure (e.g. suture), replacement surgery (e.g. vascular graft, artificial ligaments etc.) Another important category of implantable products is soft-tissue implants.

In this report, we mainly study the implantable medical textiles devices. For the suture, one unit is 100 Pcs.
