Impression die forging service is a kind of forging process, which is to place the metal blank in a mold cavity with a specific shape, and apply external pressure to make the blank plastically deform under the restriction of the mold, so as to obtain a precision metal part that matches the shape of the mold cavity. The mold design is carried out according to factors such as the shape, size, precision requirements and batch of the parts. The mold design needs to consider many aspects such as the flow law of the metal, the parting surface of the mold, the demoulding method, and the strength and rigidity of the mold.
