Abstracts

The global IMS Core Network Devices market size is expected to reach \$ 2468 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

IMS Core Network Devices are a combination of IP Multimedia Subsystem core network equipment and software network functions deployed in operator networks, public-private networks, MVNO/MVNE networks, and dedicated industry communication networks. They are mainly used to support voice, video, SMS, supplementary services, session control, subscriber data management, media processing, border security, inter-network interworking, and charging over IP bearer networks. These products typically include P-CSCF, I-CSCF, S-CSCF, TAS, SBC, IBCF, MRF, MGCF, media gateways, HSS or UDM-related network functions, and charging functions. Their core value lies in migrating traditional circuit-switched voice to a standardized IP architecture, supporting VoLTE, VoNR, VoWiFi, fixed broadband voice, legacy network interworking, and multi-access convergence. With the deployment of 5G SA, 3G network shutdowns, fixed-mobile convergence, and cloud-based core network construction, IMS core network devices are evolving from physical equipment and virtualized network functions into cloud-native, containerized, and automatically orchestrated software network functions, while gradually expanding from public operator networks to private networks, public safety, energy, transportation, and emergency communications scenarios.

The demand foundation for IMS core network devices comes from the IP transformation of voice services and the convergence of multiple network generations. Although VoLTE, VoNR, and VoWiFi correspond to 4G, 5G, and Wi-Fi access respectively, their core voice control still relies on the IMS architecture. As 3G networks are shut down, legacy circuit-switched cores are replaced, and 5G SA deployment expands, operators

need IMS core networks to centrally support mobile voice, fixed voice, roaming interworking, emergency calling, and multimedia communication services. Therefore, the industry value of IMS core network devices is not merely to replace legacy voice equipment, but to help operators maintain voice continuity, service consistency, and network evolution capability in a multi-standard, multi-access, and multi-service environment.

Product forms are shifting from dedicated physical equipment to virtualized and cloud-native software network functions. Traditional IMS systems place greater emphasis on the stability, capacity, and protocol compatibility of individual network functions, while next-generation IMS core network devices focus more on microservice architecture, containerized deployment, automated orchestration, elastic scaling, and cross-cloud operation. This means that future competition will not only depend on whether network functions are complete, but also on whether vendors can reduce deployment complexity, shorten service launch cycles, improve resource utilization, and enable stable interworking across 4G, 5G, Wi-Fi, fixed networks, and legacy voice networks. As core networks continue to move toward cloud-based architectures, IMS core network devices will gradually shift from hardware-driven procurement to competition around software capabilities, system integration capabilities, and continuous operations capabilities.

The overall market outlook is optimistic, but growth will shift from new network construction to migration upgrades and software-based replacement. Future demand will mainly come from 3G network shutdowns, legacy voice core replacement, IMS Core upgrades, cloud-native IMS modernization, large-scale 5G SA deployment, commercial VoNR expansion, enterprise private networks, and edge core network construction. The price of IMS core network devices will not simply decline along with hardware costs, because customers are increasingly shifting their procurement focus from the equipment itself to software licensing, capacity expansion, cloud-native upgrades, system integration, operations services, and long-term network evolution projects. Overall, the industry is expected to maintain steady growth and continue to release demand in operator voice modernization and industry private network communication scenarios.

This report studies the global IMS Core Network Devices production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for IMS Core Network Devices and provides market size (US\$ million) and Year-over-Year (YoY)

Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of IMS Core Network Devices that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global IMS Core Network Devices total production and demand, 2021-2032, (Units)

Global IMS Core Network Devices total production value, 2021-2032, (USD Million)

Global IMS Core Network Devices production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Units), (based on production site)

Global IMS Core Network Devices consumption by region & country, CAGR, 2021-2032 & (Units)

U.S. VS China: IMS Core Network Devices domestic production, consumption, key domestic manufacturers and share

Global IMS Core Network Devices production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Units)

Global IMS Core Network Devices production by type, production, value, CAGR, 2021-2032, (USD Million) & (Units)

Global IMS Core Network Devices production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Units)

This report profiles key players in the global IMS Core Network Devices market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Ericsson, Nokia, FiberHome Telecom Tech, Zhuhai Comleader, Genew Technologies, Huawei, ZTE, Mavenir, Ribbon Communications, Oracle, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World IMS Core Network Devices market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), volume (production, consumption) & (Units) and average price (US\$/Unit) by manufacturer, by type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the

forecast year.

(2021-2032)

7.3.2 World IMS Core Network Devices Production Value by Service Network Target
(2021-2032)

7.3.3 World IMS Core Network Devices Average Price by Service Network Target
(2021-2032)

8 MARKET ANALYSIS BY APPLICATION

8.1 World IMS Core Network Devices Market Size Overview by Application: 2021 VS
2025 VS 2032

8.2 Segment Introduction by Application

8.2.1 Mobile Voice Service Support

8.2.2 Fixed Voice Service Support

8.2.3 Wi-Fi Voice Access Support

8.2.4 Legacy Network Interworking

8.2.5 Private Network Voice Communication

8.2.6 Other

8.3 Market Segment by Application

8.3.1 World IMS Core Network Devices Production by Application (2021-2032)

8.3.2 World IMS Core Network Devices Production Value by Application (2021-2032)

8.3.3 World IMS Core Network Devices Average Price by Application (2021-2032)
