An In-Building Bi-Directional Amplifier (BDA) is a device used to enhance and distribute wireless communication signals (such as cellular, public safety, or two-way radio signals) within buildings. The BDA operates by amplifying weak signals and rebroadcasting them throughout the building in both directions?hence the term 'bi-directional.' It is commonly used in scenarios where outdoor signals are insufficient to penetrate buildings or where there is a need to improve signal coverage for mobile networks or emergency communication systems.
