According to our (Global Info Research) latest study, the global In-Building Wireless market size was valued at US\$ 21270 million in 2025 and is forecast to a readjusted size of US\$ 48050 million by 2032 with a CAGR of 12.5% during review period.

In-Building Wireless (IBW) refers to a communication system designed to provide reliable wireless coverage and high-quality connectivity within buildings. It uses a network of antennas, distributed systems, repeaters, small cells, and fiber infrastructure to extend and enhance wireless signals—such as cellular (4G, 5G), Wi-Fi, and public safety communications—throughout indoor environments like offices, shopping malls, hospitals, airports, and underground facilities. The goal of an IBW system is to ensure seamless voice, data, and emergency communication coverage indoors, support high user density, and enable smart building and IoT applications.

The global In-Building Wireless (IBW) market is experiencing steady expansion driven by the accelerating deployment of 5G networks, the growing adoption of smart buildings, and increasing demand for seamless indoor connectivity across commercial, industrial, and public environments. With modern buildings increasingly requiring high-capacity wireless systems to support dense user traffic, IoT devices, and mission-critical communication, IBW solutions such as Distributed Antenna Systems (DAS), small cells, and hybrid architectures have become essential components of digital infrastructure. Key market participants include CommScope, Corning Incorporated, AT&T, Ericsson, Nokia, TE Connectivity, Alcatel-Lucent, Huawei, Anixter, Infinite Electronics Inc., JMA Wireless, Oberon Inc., Dali Wireless, Betacom Incorporated, Lord & Company Technologies, and Airspan Networks. These companies play critical roles across the ecosystem — from telecom operators and system integrators to component suppliers and network solution providers — collectively driving innovation in indoor wireless

coverage, energy efficiency, and 5G readiness.
