The global In-car Phone Wireless Charging Units market size is expected to reach \$ 19100 million by 2029, rising at a market growth of 27.1% CAGR during the forecast period (2023-2029).

With the increasing demand for charging convenience from users, wireless charging technology for car mounted mobile phones has developed rapidly, with higher technological maturity and wider application fields. With the large-scale application in automobiles, the behavior of drivers burying their heads in searching for sockets, distinguishing between interfaces and charging lines has been avoided, improving driving safety. In terms of functional design, it integrates with the car interior, making it aesthetically pleasing and practical. The design of car mounted wireless charging generally involves several modules such as control chips, magnetic coils, sensors, and power management. When selecting a wireless charging module, attention should be paid to charging efficiency, safety, and compatibility.
