Abstracts

According to our (Global Info Research) latest study, the global In-Flight Voice Recognition market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

In-Flight voice recognition will be a huge advancement in the cockpit because speech can eliminate many manual steps required to execute a command thereby decreasing workload and allowing a pilot to focus on flying safely and efficiently. Voice can be especially helpful in the cockpit when calling up infrequently used commands or menus, for which the crew might otherwise spend significant time searching. HIPE is a core part of the Honeywell User Experience, an end-user-driven design approach for developing intuitive technology, and is key to testing next-generation concepts such as voice recognition.

To see a video demonstration of Honeywell's voice recognition testing on an ERJ170 aircraft, please visit Honeywell on YouTube. For more information on Honeywell Aerospace, please visit aerospace.honeywell.com.

Check out this blog from one of our insiders. Andy Drexler explains how some pilots were initially skeptical about the technology, but changed into true believers.
