Abstracts

According to our (Global Info Research) latest study, the global In-Home Elderly Care Service market size was valued at US\$ 443 million in 2025 and is forecast to a readjusted size of US\$ 727 million by 2032 with a CAGR of 7.0% during review period.

In-Home Elderly Care Service refers to professional care services delivered at an older adult's home to support daily living, health maintenance, safety, and quality of life. It usually includes non-medical assistance such as personal care, meal preparation, housekeeping, companionship, medication reminders, mobility support, bathing assistance, and daily activity support, and may also include basic nursing, rehabilitation support, chronic disease monitoring, and remote health management depending on local regulations and service scope. The core purpose is to help elderly people age safely and comfortably at home while reducing reliance on institutional nursing homes or hospitals.

Demand for In-Home Elderly Care Service is rising due to population aging, longer life expectancy, smaller family sizes, increasing chronic disease prevalence, and the preference of many seniors to age in place rather than move into care facilities. Business opportunities are strong in personal care, dementia care, post-discharge rehabilitation, chronic disease home monitoring, meal and bathing assistance, smart elderly-care devices, emergency response systems, and digital care management platforms. Service providers can differentiate through trained caregivers, standardized service packages, 24/7 response capability, family communication apps, remote monitoring, insurance or government payment integration, and combined online-offline care models.
