An In-Line Automated Programming System is a type of equipment integrated into production lines for automated programming (flashing) of electronic components or integrated circuits (ICs) during the assembly process. This system operates in coordination with other production equipment, automatically picking up the components or ICs to be programmed, performing firmware or software programming, and then transferring the programmed components to the next stage of the production line without halting operations. This significantly enhances production efficiency, reduces manual handling, and ensures consistency and precision in the programming process.
