According to our (Global Info Research) latest study, the global In-Mold Coatings market size was valued at USD 9833.3 million in 2023 and is forecast to a readjusted size of USD 12790 million by 2030 with a CAGR of 3.8% during review period.

The in-mold coating (IMC) process incorporates coating into the molding process. This process reduces the amount of solvents needed and provides beneficial environmental impacts. The use of IMC with injection-molded parts has the potential for reducing, or eliminating, the volatile organic compounds associated with the painting process. To date, the IMC process has been successfully applied to sheet molding compound compression-molded parts to provide a primed surface that can then be electrostatically painted in a separate process.
