According to our (Global Info Research) latest study, the global In-Mold Labelling System market size was valued at USD 418.8 million in 2023 and is forecast to a readjusted size of USD 489.3 million by 2030 with a CAGR of 2.2% during review period.

This report focus on In-Mold Labelling System market. In-mould labelling is the use of paper or plastic labels during the manufacturing of containers by blow molding, injection molding, or thermoforming processes. The label serves as the integral part of the final product, which is then delivered as pre-decorated item.

In-mould labelling is a popular method of decorating injection molded parts for consumer electronics and for plastic bottles. Notebook computer and cellphone manufacturers are adopting IML technology for greater wear resistance than spray painting or pad-printing. IML can provide greater decorating options than other methods.
