In silico also known as computer-aided drug design is a process by which the drug is design or discovered by using computational methods. Drug discovery process is carried out to identify new drug molecules that can attach to a specific target. This method of identifying drugs is based on computation and the entire process is considered linear and consecutive. Various factors make in-silico drug discovery method more productive and a wise approach in comparison to earlier drug discovery methods used for the drug development process. In-silico drug design can play a significant role in all stages of drug development – from the initial lead designing to final stage clinical development.
