Abstracts

In situ hybridization (ISH) is a type of hybridization that uses a labeled complementary DNA, RNA or modified nucleic acids strand to localize a specific DNA or RNA sequence in a portion or section of tissue (in situ), or, if the tissue is small enough, in the entire tissue, in cells, and in circulating tumor cells (CTCs). This is distinct from immunohistochemistry, which usually localizes proteins in tissue sections.

SCOPE OF THE REPORT:

This report studies the In situ Hybridization market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the In situ Hybridization market by product type and applications/end industries.

North America is expected to account for the largest share of the market in 2018. This can be attributed to growing clinical and research in cancer by biotechnology and pharmaceutical companies, government initiatives, increasing prevalence and diagnosis of cancer in the U.S. and Canada, and increasing adoption of companion diagnostics. Increased adoption of companion diagnostics is attributed to the development and launch of newer therapeutic agents. However, the Asia-Pacific region is expected to grow at the highest CAGR during the forecast period. This can be attributed to the growing presence of international players in China and India, increasing cancer prevalence and diagnosis, and increased healthcare expenditure across the Asia-Pacific region are drivers for the in situ hybridization market in this region.

The global In situ Hybridization market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of In situ Hybridization.

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
