In-tank Viscometer is an instrument designed to measure the viscosity (a measure of a fluid's resistance to flow) of a liquid directly within a storage tank or process vessel. This type of viscometer is typically installed permanently within the tank, allowing for continuous monitoring of the liquid's viscosity without the need to sample and test the fluid externally. In-tank viscometers are used in various industries, including chemicals, petrochemicals, pharmaceuticals, and food processing, where the viscosity of the liquid can be a critical parameter affecting process efficiency, product quality, and safety.
