Attributes is becoming extremely important with the constant evolution of commercial and defence automotive systems. To accomplish this task, acquiring of various vehicle parameters in real time while the vehicle is on the move becomes critical. However, the device that can acquire this real time data by sitting inside the vehicle should be compact, rugged, and low power consuming in characteristics. In-vehicle data acquisition system exactly provides all these essential features with multi-protocol connectivity options. In particular, the development of the ADAS and electrification trend has also had a positive impact on the market expansion of the In-vehicle data acquisition system.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest

automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
