According to our (Global Info Research) latest study, the global In Vitro Fertilization market size was valued at USD 546.5 million in 2023 and is forecast to a readjusted size of USD 818.2 million by 2030 with a CAGR of 5.9% during review period.

In vitro fertilisation (IVF) is a process of fertilisation where an egg is combined with sperm outside the body, in vitro. The process involves monitoring and stimulating a woman's ovulatory process, removing an ovum or ova (egg or eggs) from the woman's ovaries and letting sperm fertilise them in a liquid in a laboratory. The fertilised egg (zygote) undergoes embryo culture for 2–6 days, and is then transferred to the same or another woman's uterus, with the intention of establishing a successful pregnancy.

Geographically, the in vitro fertilization market in Asia Pacific accounts for the largest share of the global market, followed by Europe. The large share and high growth rate of the APAC region can be attributed growth in the median age of first-time motherhood, rising infertility rates, growing prevalence of PCOS, increasing incidence of obesity, rise in fertility tourism, and government initiatives.
