The global In Vitro Testing for Infectious Diseases market size is expected to reach \$ 50970 million by 2030, rising at a market growth of 7.1% CAGR during the forecast period (2024-2030).

The In Vitro Testing for Infectious Diseases market is driven by the global demand for rapid and accurate diagnostic solutions, particularly in the context of infectious diseases. In vitro diagnostic devices, encompassing molecular assays, immunoassays, and nucleic acid-based tests, play a pivotal role in the early detection and management of infectious pathogens. The ongoing threat of pandemics, such as the COVID-19 pandemic, has accelerated the need for advanced testing technologies. Additionally, the increasing prevalence of infectious diseases worldwide, coupled with initiatives to control their spread, fuels the market's growth. Technological innovations, including point-of-care testing, contribute to the market's dynamism, addressing the urgent need for timely and reliable infectious disease diagnostics.

In vitro diagnostic (IVD) testing for infectious diseases involves laboratory-based analysis of biological samples, such as blood, urine, or swabs, to detect the presence of infectious agents or markers associated with infections. These tests play a crucial role in the diagnosis, monitoring, and management of infectious diseases.
