Abstracts

According to our (Global Info Research) latest study, the global Indazole-3-carboxylic Acid market size was valued at US\$ 3.28 million in 2025 and is forecast to a readjusted size of US\$ 5.78 million by 2032 with a CAGR of 8.4% during review period.

In 2025, global sales volume of Indazole-3-carboxylic Acid was approximately 22 tons, with an average global market price of about USD 145/kg. The gross margin of major manufacturers was generally around 28%~42%.

Indazole-3-carboxylic Acid is a heterocyclic carboxylic acid fine chemical containing an indazole skeleton, with CAS No. 4498-67-3. It is typically an off-white to light-yellow powder or crystalline solid at room temperature. With both an indazole ring and a carboxyl functional group, the product can participate in amidation, esterification, substitution and structural modification reactions. It is a commonly used pharmaceutical intermediate and heterocyclic building block in the synthesis of small molecules containing indazole structures. Commercial specifications are mainly 98% and 99% purity grades.

The upstream raw materials of Indazole-3-carboxylic Acid mainly include basic indazole raw materials, carboxylation or oxidation reagents, organic solvents, catalysts, acid-base regulators and purification auxiliaries. The midstream process involves cyclization, carboxyl group introduction, separation, purification, crystallization, drying and quality control to produce intermediate products. Downstream applications are mainly pharmaceutical intermediates, where the product can be used in the synthesis of granisetron and other indazole-containing drugs or related candidate small molecules. Agrochemical intermediates and fine chemical intermediates are auxiliary applications,

mainly serving the development of nitrogen-containing heterocyclic compounds, custom synthesis and small-batch functional molecule preparation.
