## Abstracts

According to our (Global Info Research) latest study, the global Indemnity-based Weather Insurance market size was valued at US\$ 15434 million in 2025 and is forecast to a readjusted size of US\$ 21531 million by 2032 with a CAGR of 4.9% during review period.

Indemnity-based Weather Insurance is a traditional weather insurance product that provides compensation based on the actual financial losses caused by adverse weather events. Under this insurance model, the policyholder and insurer define the covered weather risks, loss assessment methods, and compensation conditions in advance. When extreme weather events such as droughts, heavy rainfall, floods, frost, heatwaves, or hail occur and result in measurable economic losses, the insurer evaluates the actual damage through claims investigation and pays compensation according to the terms of the insurance policy. Unlike Parametric Weather Insurance, which triggers payouts based on predefined weather indexes reaching specific thresholds, Indemnity-based Weather Insurance relies on the verification of actual losses and the assessment of the corresponding financial impact. This type of insurance is widely used in agriculture, energy, tourism, construction, logistics, and other weather-sensitive industries, providing traditional risk protection against climate-related uncertainties.
