According to our (Global Info Research) latest study, the global Indene market size was valued at US\$ 288 million in 2024 and is forecast to a readjusted size of USD 353 million by 2031 with a CAGR of 3.0% during review period.

Indene (CAS 95-13-6) is a flammable polycyclic hydrocarbon with chemical formula C₉H₈. It is composed of a benzene ring fused with a cyclopentene ring. This aromatic liquid is colorless although samples often are pale yellow. The principal industrial use of indene is in the production of indene/coumarone thermoplastic resins.

Indene can come from deep processing of coal tar or from C₉ fraction. According to QYR research, most of the Indene comes from the C₉ fraction, but most of the Indene is further processed into resins because selling Indene directly is very cumbersome and has a small profit. Therefore, Indene rarely appears on the market, but this market does exist.

Global Indene (CAS 95-13-6) key players include Eastman, Shandong Kete Chemical, Guangdong Xinhua Yue Petrochemical, Neville Chemical, etc. Global top four manufacturers hold a share over 20%.

Japan is the largest market, with a share over 15%, followed by Europe, and USA, both have a share about 30 percent.

In terms of product, 65%-75% Indene is the largest segment, with a share over 95%. And in terms of application, the largest application is Coumarone Indene Resin, followed by Styrene Indene Resin.

This report is a detailed and comprehensive analysis for global Indene market.
