According to our (Global Info Research) latest study, the global Independent Air Duct EV Charger Power Module market size was valued at USD 713.1 million in 2022 and is forecast to a readjusted size of USD 1393.9 million by 2029 with a CAGR of 10.0% during review period.

Independent air duct cooling: through optimizing the air duct design, the electronic components are designed in the closed box above the module, the heat sink is placed in the lower side of the closed box, the heat sink and the closed box are surrounded by waterproof and dustproof design, and the hot electronic components are concentrated on the inner side of the heat sink, and the fan is only blowing on the outer side of the heat sink to dissipate the heat, so that the electronic components are free from dust contamination and corrosion, which greatly reduces the failure rate of the product and increases the reliability and service life of the charging module. This greatly reduces the failure rate of the product and improves the reliability and service life of the charging module.
