The global Independent ISP Chip market size is expected to reach \$ 968.7 million by 2029, rising at a market growth of 6.1% CAGR during the forecast period (2023-2029).

Global key players of Independent ISP Chip include STMicroelectronics and Onsemi. The top two players hold a share over 38%.

Asia-Pacific is the largest market, has a share about 55%, followed by Europe and North America, with share 15% and 18%, separately.

In terms of product type, Supports HDR Chip is the largest segment, occupied for a share of 92%, and in terms of application, Security has a share about 40%.

ISP, abbreviated as 'Image Signal Processor', is a unit used to process the output signals of front-end image sensors. ISP chips are divided into two types: integrated and independent. Currently, most mobile phones use integrated ISP chips that come with processors, which are integrated into the phone's SOC processor. The independent ISP chip exists independently of the processor, and although it has a high cost, its advantages are also quite obvious.
