## **Abstracts**

According to our (Global Info Research) latest study, the global Indirect Calorimeter market size was valued at US\$ 21.9 million in 2024 and is forecast to a readjusted size of USD 26.9 million by 2031 with a CAGR of 3.0% during review period.

Indirect calorimetry calculates heat that living organisms produce by measuring either their production of carbon dioxide and nitrogen waste (frequently ammonia in aquatic organisms, or urea in terrestrial ones), or from their consumption of oxygen. Indirect calorimetry is the method by which the type and rate of substrate utilization, and energy metabolism are estimated in vivo starting from gas exchange measurements (carbon dioxide production and oxygen consumption during rest and steady-state exercise). This technique provides unique information, is noninvasive, and can be advantageously combined with other experimental methods to investigate numerous aspects of nutrient assimilation, thermogenesis, the energetics of physical exercise, and the pathogenesis of metabolic diseases.

Global Indirect Calorimeter main players are MGC Diagnostics, COSMED, Vyair Medical, Microlife, etc. Global top four manufacturers hold a share over 80%. North America is the largest market, with a share above 45%.
