According to our (Global Info Research) latest study, the global Indexing Tables market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

An indexing table is a machine tool positioning device. Also sometimes called a rotary indexing table or just rotary table, they repeat the process of rotating or “indexing” around an axis, stopping, dwelling while an operation is performed, then indexing again so the process can be repeated. Indexing Table is a mechanism that achieves intermittent motion, with significant characteristics such as high precision, long lifespan, small size, low noise, good high-speed performance, and long lifespan.

Indexing tables are vital to the manufacturing and assembly processes in countless facilities around the world. They are incredibly useful and efficient machines in automation applications, and can help to complete certain tasks faster than a person alone or in some applications, most other machines could. Indexing tables need to be incredibly accurate, precise and consistent to perform their task in a satisfactory fashion, making them quite sophisticated and technologically advanced.
