Abstracts

Indium piece is a thin sheet or strip made from the metal indium. Indium is a soft, silvery element with excellent thermal and electrical conductivity properties. Indium foil is commonly used in various applications, particularly in the electronics industry. It is used as a thermal interface material, allowing for efficient heat transfer between components. The foil is also utilized in cryogenic applications, as indium has a low melting point, making it suitable for sealing purposes in low-temperature environments.

According to our (Global Info Research) latest study, the global Indium Piece market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

The industry trend for indium piece has focused on improving its performance in thermal management and developing innovative applications in emerging technologies, such as flexible electronics and wearable devices. The demand for indium foil is expected to grow in line with the expanding electronics and technology sectors.
