Abstracts

The global Indium Tin Oxide Stripper market size is expected to reach \$ 60.09 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

Indium tin oxide (ITO) stripping agents are specialized chemical agents used in the manufacturing processes of flat panel displays, touch glass, and semiconductors to selectively remove the deposited transparent conductive layer of ITO. They achieve efficient stripping through controlled chemical reactions without damaging the substrate, making them a key consumable in ITO cleaning and rework processes. Global sales in 2025 were approximately 21,000 tons, with an average unit price of approximately US\$1,900 per ton and a capacity utilization rate of approximately 78%. The upstream and downstream companies are suppliers of high-purity acids, alkalis, and complexing agents, manufacturers of fine electronic chemicals, and downstream display panel manufacturers, touch module manufacturers, and semiconductor wafer fabs. The gross profit margin for this type of product is typically around 35%. The product cost structure mainly consists of 50% for high-purity chemical raw materials, 20% for formulation development and process control, 10% for quality testing and stability verification, 10% for packaging and safe transportation, and 10% for technical services and on-site support. On the demand side, the downstream demand list includes transparent conductive film stripping, display panel rework cleaning, touch electrode re-fabrication, semiconductor interconnect layer cleaning, and optoelectronic device surface treatment; the downstream customer list covers LCD and OLED panel manufacturers, touch display module manufacturers, wafer manufacturing companies, photovoltaic and optoelectronic device manufacturers, and third-party electronic cleaning service providers. In terms of business opportunities, policy drivers are mainly reflected in the strengthening of green manufacturing and safe emission standards, promoting increased demand for low-corrosion, low-residue stripping agents; technological

innovation drives upgrades in chemical formulations with higher selectivity, lower damage, and higher stability; and changing consumer demands are reflected in the evolution of terminal display products towards higher resolution, larger size, and higher yield, thereby driving the continuous penetration and upgrading of high-performance indium tin oxide stripping agents in advanced manufacturing systems.
