## Abstracts

According to our (Global Info Research) latest study, the global Individual Quick Freezer market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Individual Quick Freezer uses special freezing technology to quickly freeze food from normal temperature to below -18?, achieving the effect of quick freezing. The characteristic of this freezing method is that it can freeze each food unit individually and quickly, so as to maintain the original shape, color, flavor and nutrients of the food.

The working principle of Individual Quick Freezer is to generate a low temperature environment through the refrigeration system, so that the food can reach the required freezing temperature in a very short time. Compared with traditional freezing methods, IQF technology can achieve a faster and more uniform freezing effect, reduce the water movement and ice crystal formation inside the food cells, so as to maintain the original quality and taste of the food.

Individual Quick Freezer has a wide range of applications and is suitable for the freezing of various fruits, vegetables, seafood, meat, pasta and other foods. Through IQF technology, food can maintain its freshness and nutritional value for a long time without adding any preservatives, extend the shelf life, and meet the needs of modern consumers for high-quality, healthy and convenient food.
