## Abstracts

According to our (Global Info Research) latest study, the global Indole market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Indole is an aromatic heterocyclic organic compound with formula  $C_8H_7N$ . It has a bicyclic structure, consisting of a six-membered benzene ring fused to a five-membered pyrrole ring. Indole is widely distributed in the natural environment and can be produced by a variety of bacteria. As an intercellular signal molecule, indole regulates various aspects of bacterial physiology, including spore formation, plasmid stability, resistance to drugs, biofilm formation, and virulence. The amino acid tryptophan is an indole derivative and the precursor of the neurotransmitter serotonin. It is used as a reagent for the determination of nitrite, also for the manufacture of spices and pharmaceuticals.

With the promotion of domestic ecological agriculture, the demand for green, efficient, and low-toxic pesticides continues to increase, and the application prospects of indole as a pesticide raw material are even broader. In addition, with the rapid development of the global economy, the market size of the pharmaceutical manufacturing field is also expanding. As one of the important raw materials for pharmaceutical manufacturing, the market demand for indole is bound to increase.

The Global Info Research report includes an overview of the development of the Indole industry chain, the market status of Dye (Purity(Above 99%), Purity(99%-95%)), Pharmaceutical Industry (Purity(Above 99%), Purity(99%-95%)), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Indole.
