Abstracts

The global Indoor AC Metal Enclosed Switchgear market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

AC metal-enclosed switches belong to the midstream industry of high-voltage switches. In the future, investment in the electrical equipment industry will show a 'bipolar' trend: UHV backbone network and distribution network transformation will become the theme of power grid investment, and 'intelligentization' will drive the proportion of secondary equipment to increase. The high-performance high-voltage switch market will also achieve large-scale development in this process. In the future, the construction of ultra-high voltage, ultra-high voltage power grids and smart grids will drive market demand for high-end products in the field of power transmission and transformation, further accelerating the process of technological innovation in the high-voltage switch manufacturing industry.

Intelligent indoor AC metal-enclosed switchgear is based on the fusion of sensor technology, microcomputer processing technology, automatic control technology, fault analysis and diagnosis technology, signal processing and communication technology, etc., to achieve visual monitoring of the status within the cabinet and collection of various operations of the switchgear. Status data performs health diagnosis on switch equipment, comprehensively perceives the status of switch equipment, diagnoses faults, eliminates hidden dangers, improves the reliability and safety of switch equipment, reduces operation and maintenance costs and failure probability, and ensures power supply reliability.
