## Abstracts

The global Indoor Medium Voltage Vacuum Circuit Breaker market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

At present, due to the high barriers to entry in the medium-voltage circuit breaker accessories industry, there are few companies in the domestic market. This is because medium-voltage circuit breaker accessories companies usually need years of production accumulation and continuous capital investment to develop thousands of different molds and fixtures to produce corresponding accessory products to meet market demand. At the same time, due to the wide variety of medium-voltage circuit breaker accessories and the high degree of product personalization, the production and operation of accessories reflect the characteristics of multiple varieties, small batches, and multiple batches, which is very important for the company's R&D innovation, production management, and rapid response to customer needs. have put forward very high demands. For new entrants to the industry, in addition to requiring huge capital investment in mold development, it is also difficult to quickly establish a R&D and production system that adapts to the wide variety of medium-voltage circuit breaker accessories in the short term. The industry barriers are obvious.

Vacuum circuit breaker is named because its arc extinguishing medium and the insulating medium in the contact gap after arc extinguishing are both high vacuum; it has the advantages of small size, light weight, suitable for frequent operations, and no maintenance required for arc extinguishing. It is widely used in power grids. Vacuum circuit breaker is an indoor power distribution device in a 3-10kV, 50Hz three-phase AC system. It can be used for the protection and control of electrical equipment in industrial

and mining enterprises, power plants, and substations. It is especially suitable for oil-free and low-voltage applications. In places where maintenance and frequent operations are used, circuit breakers can be configured in central cabinets, double-layer cabinets, and fixed cabinets to control and protect high-voltage electrical equipment.
