## Abstracts

The global Indoor Positioning and Navigation System (IPNS) market size is expected to reach \$ 3381 million by 2032, rising at a market growth of 9.6% CAGR during the forecast period (2026-2032).

An Indoor Positioning and Navigation System (IPNS) is a system used within buildings (such as shopping malls, airports, hospitals, libraries, and factories) to achieve real-time location acquisition and route navigation for personnel, equipment, or assets. It typically consists of positioning base stations/beacons (such as BLE Beacons, UWB base stations, and Wi-Fi access points), mobile terminals (phones, handheld devices, tags), a positioning engine server, a map engine, and visualization applications. Coverage areas range from hundreds of square meters on a single floor to tens of thousands of square meters across multiple buildings, and it supports a combination of technologies including BLE, UWB, Wi-Fi, RFID, inertial navigation, and magnetic fingerprinting. The future trend clearly points to multi-technology integrated positioning (UWB+BLE+inertial), combined with digital twin/3D visualization platforms, and integrated with security/operation systems to form a 'location intelligence hub,' rather than a single navigation tool.

This report studies the global Indoor Positioning and Navigation System (IPNS) demand, key companies, and key regions.
