Abstracts

Pluripotent stem cells are embryonic stem cells that have the potential to form all adult cell types and help in repairing of damaged tissues in the human body. An induced pluripotent stem cells, or iPSCs, are taken from any tissue (usually skin or blood) from a child or an adult and is genetically modified to behave like pluripotent stem cells or embryonic stem cells.

Scope of the Report:

iPSCs market is in emerging state mainly due to its ability to make any cell or tissue the body might need to encounter wide range of diseases like diabetes, spinal cord injury, leukaemia or heart disease, these cells can potentially be customized to provide a perfect genetic match for any patient.

The global Induced Pluripotent Stem Cells market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
