According to our (Global Info Research) latest study, the global Induction Brazing market size was valued at US\$ 120 million in 2025 and is forecast to a readjusted size of US\$ 182 million by 2032 with a CAGR of 6.2% during review period.

Induction brazing is a process used to join two or more metal components together using the principle of induction heating. In this process, a high-frequency alternating current (AC) is passed through a copper coil, which generates an alternating magnetic field. When a metal component is placed within this magnetic field, eddy currents are induced in the metal, causing it to heat up rapidly due to resistance to the flow of electrical current. An induction brazing machine is a specialized piece of equipment used to perform induction brazing processes. It employs the principle of electromagnetic induction to generate heat in the metal components being brazed, allowing for precise and controlled heating of the joint area.

Global key players of Induction Brazing include Eldec, Radyne Corporation, AjaxTOCCO Magnethermic GmbH, CEIA, ENRX, etc. The top five players hold a share about 31%. Asia Pacific is the world's largest market for Induction Brazing and holds a share about 41%, followed by Europe and North America, with share about 29% and 24%, separately. In terms of product type, Automatic is the largest segment, accounting for a share about 65%. In terms of application, Automotive is the largest field with a share about 51 percent.
