## Abstracts

Induction furnace is an electrical furnace that facilitates melting of metal using induction heating. It is an energy-efficient and easily-controlled melting process, based on the heating effect of the electromagnetic field.

### SCOPE OF THE REPORT:

This report focuses on the Induction Furnace (IF) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

A typical induction furnace comprises inductor coil, shell, crucible, and cooling system, and a tilting mechanism for pouring the molten metal. The inductor coil generates magnetic flux as alternating current passes through it. It is the magnetic flux that creates the heating effect inside the furnace.

Induction furnace has emerged as a boon for small-scale metal manufacturers. It is smaller in size, when compared to Electric Arc Furnace, and has low operational cost. Besides, it comes at an affordable price, which makes the induction furnace the first choice for small scale companies.

The worldwide market for Induction Furnace (IF) is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
