According to our (Global Info Research) latest study, the global Induction Pad market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Induction liner is a sealing material used for induction sealing of plastic bottle mouths. It is usually a thin sheet made of aluminum foil or a composite of aluminum foil and is conductive. When the induction sealing machine places the induction liner on the mouth of the plastic bottle and heats it by electromagnetic induction, the induction liner will quickly generate heat, melting the plastic material around the mouth of the plastic bottle and forming a seal with the mouth of the bottle.
