Abstracts

The global Induction Pad market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Induction liner is a sealing material used for induction sealing of plastic bottle mouths. It is usually a thin sheet made of aluminum foil or a composite of aluminum foil and is conductive. When the induction sealing machine places the induction liner on the mouth of the plastic bottle and heats it by electromagnetic induction, the induction liner will quickly generate heat, melting the plastic material around the mouth of the plastic bottle and forming a seal with the mouth of the bottle.

This report studies the global Induction Pad production, demand, key manufacturers, and key regions.
