According to our (Global Info Research) latest study, the global Induction Test Pencil market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

An induction test pencil is a device that checks voltage. Unlike a tester, it cannot check the voltage value.

Induction test pencils can be used to check the voltage by simply placing them on the charging path to be investigated. Induction Test Pencils are available for low voltage, high voltage, alternating current, and both AC and AC-DC, so it is necessary to distinguish between these types. It is also necessary to know whether the charging circuit is AC or DC.
