Abstracts

According to our (Global Info Research) latest study, the global Inductive Components market size was valued at US\$ 7523 million in 2025 and is forecast to a readjusted size of US\$ 10426 million by 2032 with a CAGR of 4.8% during review period.

Inductive components are passive electronic components that use current changes to generate a magnetic field around a conductor and store magnetic energy. Their basic characteristic is to obstruct current changes, and they are widely used in circuits such as filtering, energy storage, choke, resonance, and electromagnetic interference suppression. Inductance is usually composed of wires wound around magnetic cores or air cores. Depending on the structure and process, different inductance values, current carrying capacity, and frequency characteristics can be achieved. It is a key basic component in power management, signal processing, and RF systems, with core technologies focused on magnetic materials, winding processes, and micro manufacturing capabilities. In 2025, global Inductive Components production reached approximately 1,779 M Units, with an average global market price of around US\$ 4.11 per unit.

Inductive components are one of the most stable and largest sub sectors in electronic components, driven by consumer electronics, communication equipment, automotive electronics, and new energy industries, with the overall market maintaining steady growth. The industry presents a competitive pattern of 'Japanese enterprises leading the high-end, Taiwanese and Chinese Mainland manufacturers catching up quickly', with fierce competition in low-end products and high technical barriers in high-end fields. With the development of applications such as 5G communication, electric vehicles, power management upgrades, and AI servers, the demand for high-frequency, high-

power, and miniaturized inductors continues to increase, driving the product structure to upgrade towards high added value. The industry's output growth rate is expected to be higher than the shipment growth rate for the long term.
