According to our (Global Info Research) latest study, the global Industrial Absorbents market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Industrial absorbents are a type of material that is primarily used for the extraction of chemicals or fluids spilled on different surfaces or floors. It is comprised of soaking chemicals and materials specifically for these kinds of spills that help in the extraction process and are more effective than a normal absorbent. Industrial absorbent is chemically inert in nature which makes them safe for use on any kind of surface or chemicals.

The market of absorbent for industrial use in Europe is fragmented and the competition within the industry is fierce. The top 10 producers Sepilosa, Tolsa, Diamix, Imerys Absorbents and so on together have less than 10 per cent of the Europeanwide market share, with the rest divided among a number of smaller companies. In 2019, producers mainly produced natural inorganic industrial absorbents, accounting for about 65 percent of the production share. However, the main profit source of this product is the synthetic industrial absorbents, which accounts for less than 20% of the production share, bringing more than 60% of the profit comes .
