## Abstracts

The global Industrial Acenaphthene market size is expected to reach \$ 38.60 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of Industrial Acenaphthene was approximately 7,300 tons, with an average market price of around USD 3,800/ton. The gross margin of major producers was generally in the range of 20%-35%.

Industrial Acenaphthene is an industrial-grade polycyclic aromatic hydrocarbon chemical raw material separated from coal tar deep-processing fractions. Its main component is acenaphthene, with the molecular formula C<sub>12</sub>H<sub>10</sub> and CAS No. 83-32-9. The product is typically a white to light-yellow crystalline or flake solid, featuring a fused aromatic ring structure and good reactivity for subsequent oxidation, substitution and condensation reactions.

The upstream of the Industrial Acenaphthene value chain mainly includes coal tar, wash oil, anthracene oil and other heavy aromatic fractions. Product quality is highly influenced by feedstock composition, fractional distillation, crystallization and purification, as well as impurity control capability. The midstream consists of coal tar deep-processing companies that separate and refine Industrial Acenaphthene, with possible downstream extension into derivatives such as acenaphthenequinone. Downstream applications mainly include dyes, pesticides, medicine, functional materials and resin additives. Industry value is mainly concentrated in high-purity separation and purification, stable bulk supply, impurity control, and integrated downstream derivative production capabilities.

This report studies the global Industrial Acenaphthene production, demand, key
