According to our (Global Info Research) latest study, the global Industrial Additive Manufacturing market size was valued at US\$ 19350 million in 2024 and is forecast to a readjusted size of USD 60090 million by 2031 with a CAGR of 17.8% during review period.

Industrial Additive Manufacturing, often referred to as industrial 3D printing, is a cutting-edge manufacturing process that involves the creation of three-dimensional objects by adding material layer by layer. Unlike traditional subtractive manufacturing methods, which involve cutting or shaping material from a solid block, additive manufacturing builds objects incrementally, enabling complex and intricate designs that may be difficult or impossible to achieve using conventional techniques.

Industrial additive manufacturing was gaining traction in a broad range of industries beyond aerospace and healthcare. Automotive, electronics, consumer goods, and energy sectors were increasingly using AM for prototyping, tooling, and end-use part production.
