Abstracts

The global Industrial Air Chiller market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A machine that removes heat from a liquid substance via vapor compression or absorption is called an air chiller. Industrial air chiller plays a vital role in the industrial processes as an excess amount of heat is been absorbed by these air chillers which is generated from processing liquids such as oil, water coolant, or glycol. This heat is transferred to the air around these air chiller units. Industrial air chillers are used in a broad range of applications that requires removal of excess heat and this includes welding, metal finishing, brewery, plastic processing, hydroponics, explosion-proof, water jet cutting. Generally water-cooler and air-cooler chillers preferred by the companies.
